

About HyO

Science journals have presented clear evidence and made the case for why molecular hydrogen improves the growth, health and stamina of agricultural products. HyO Technologies Inc, a leader in molecular hydrogen generation, discovered a major breakthrough for creating hydrogen and oxygen DIRECTLY and SAFELY in a waterline, for use in agricultural applications.

HyO Technologies

Hydrogen-Rich Water for Agriculture

HyO Technologies™

Sustainable and Profitable
Solutions for the Future!

The HyO Vision

To use our resources with maximum efficiency.

To use nutrients and soil amendments the way God intended.

To elevate the farming community as the true stewards of the planet.

To build trust through ethical and transparent practices in science, business, and charity.

How HyO Works

Our products are designed to connect directly to the irrigation line, where molecular hydrogen and oxygen are created in the flowing water, as it passes by our electrolyzer homogenizing and dissolving into the water itself along the way to the target.

“ *Hydrogen For
Healthy Agriculture* ”

HyO Solutions

- ✓ **Plant & Crops Improvements**
We specialize in improving yields and growth of plants & crops
- ✓ **Livestock, Poultry & Fish**
Provide comprehensive livestock, poultry & fish growth
- ✓ **Post Harvest Preservation**
Longer preservation without the need for chemicals
